### **botspot sets on expansion**

Botspot GmbH, the market leader for photogrammetric 3D scanning systems, sets the course for further expansion. A new round of financing will continue to boost the development of botspot. The focus remains on industrial applications and smart scanning solutions.

There are also personnel changes at botspot. The staff will be extended by a new developer team. The former General Manager and co-founder Manfred Ostermeier withdraws from the operative management. He will act as the new Chairman of the Supervisory Board and will continue to support strategic and technological orientation.

Sascha Rybarczyk will be botspot's General Manager from today on. The 33-year-old International Manager joined botspot in early 2018. Sascha Rybarczyk previously worked in the areas of Finance and Consulting for seven years, including at Deloitte.
